### DETAILED ACTION

This Office action is in response to the amendment filed March 6, 2006 in which claims 1, 4, 5 and 18-33 were amended. The rejections of the claims under 35 USC 112 and 102 are withdrawn in view of the amendment to the claims and applicant's arguments.

#### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3-5, 15-21 and 31-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heubner 5,457,265.

Heubner teaches a method and means for the oxidative destruction of azides (see abstract). Heubner's invention is applicable to any azide e.g. inorganic or organic azides (see col. 1, lines 60-64). Heubner's process is carried out by adding a catalytic amount of thiosulfate, iodine and potassium iodine to the azide (see col. 1, line 66 through col. 2, lines 1-5). The iodine/potassium iodide/thiosulfate may be employed in the form of tablets wherein non-catalytic material is also present (see col. 2, lines 31-38).

Heubner teaches the limitations of the claims other than the specific azide of the claims R-N<sub>3</sub>. However, it would have been obvious to one of ordinary skill in the art to

Art Unit: 1714

select the claimed azide because Heubner teaches that any azide may be decomposed by contact with the composition.

3. Claims 6-14 and 22-30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art fails to teach or suggest that the catalyst comprises a transition metal halide or that the catalyst is dispersed on a support.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cephia D. Toomer whose telephone number is 571-272-1126. The examiner can normally be reached on Monday-Thursday.
